■■■■ Nginx
■■■ Docker
■■ Kubernetes

METHODOLOGY

Agile / Scrum
Road-mapping
TDD / BDD
CI / CD

PROFESSIONAL EXPERIENCE

Senior Software Engineer

Full-stack / Front-end

Nov 2018 - Dec 2023

Smartsheet

Bellevue, WA

Designed a ground up architecture for a new extensible administrative platform for Smartsheet, both personally developing and leading a small team to implement the vision.

- Grew the product through a phase two, with a smaller subset of individuals under my ward, and focused on supporting micro-frontend capabilities to support extension by other teams.
- Lead all UX review and implementation strategizing for multiple teams, including (other team members?) building out several additional modules using the new microfrontend patterns.
- Served as a principle contact for all broader, company-wide front-end efforts (for my teams) to ensure they followed company best practices
- Also contributed more globally by driving full-stack best practices, and solved a number of performance problems in my relevant team(s) domain of monolith capabilities, just to add icing.

Skills: HTML, CSS, JavaScript, TypeScript, Java, React, Redux, RxJs, Node.js, Storybook, AWS, Spring, Nginx, Kubernetes, Docker

Software Design Engineer II

Full-stack

Mar 2016 - Nov 2018

SAP Concur

Bellevue, WA

Responsible for taking projects with ambiguous requirements, designing a plan, and delivering features

- Engineered an in-product messaging service from scratch, aimed at eliminating the reliance on Google Analytics for stakeholders. This service was built with Python and Cassandra, and optimized to handle hundreds of impressions per second.
- Developed a versatile in-product messaging widget using React. This widget was designed to seamlessly integrate into various and complex legacy pages without causing visual regressions, offering enhanced "ad" capabilities beyond those provided by Google Analytics.
- Led the design and implementation of an administrative application to facilitate the transition of stakeholders from Google Analytics to an in-house solution. This tool also maintained integration capabilities with Google Tag Manager, ensuring a smooth transition and continued support.

Skills: HTML, CSS, JavaScript, TypeScript, React, Redux, RxJs, Node.js, Storybook, AWS, ASP.NET, C#, Nginx, Kubernetes, Docker

PROFESSIONAL EXPERIENCE (CONT.)

Front-end Engineer

Oct 2015 - Feb 2016

Front-end exclusive role focused on maintenance of an Angular/D3.js analytics dashboard.

- Developed a dynamic tooltip widget that could be used in any chart or visual context.
- Enhanced chart UIs with a light/dark theming capability to match the latest UX design system.

Skills: HTML, CSS, SASS, Angular, D3.js

Applause

Bellevue, WA

Software Engineer

Front-end

Jul 2013 - Oct 2015

Responsibilities included the development of customer products, serving as the team's front-end subject-matter expert, and delivering pixel-perfect UIs.

- Drove feature areas and contributed to a large-scale Angular recognition platform called Maestro for Madison Performance Group.
- Contributed to Spectrum UI, a novel web-to-MPEG streaming platform framework written in JavaScript.
- Built a faceted search solution, including Google Maps integrations and a discovery portal for American Homes 4 Rent, and additionally contributed to product ideation to assist the customer's design vision.

Skills: HTML, CSS, SASS, LESS, JavaScript, jQuery, Angular, C#, .NET, Bootstrap

Slalom Consulting

Seattle, WA

Web Developer & Teacher's Assistant

Part-time

Jun 2012 - Mar 2013

Held a couple of roles through the University of Washington

- Worked for UWTV, developing a small LAMP stack web application for broadcast operators to communicate across shifts.
- Worked for the Dept of Student Aid, helping to digitize a number of form-based paper workflows.
- Designed and ran lab sessions for an introductory Databases class as a Teacher's Assistant

Skills: HTML, CSS, JavaScript, jQuery, SQL, PHP, (LAMP)

University of Washington

Seattle, WA
